Publish Your First Website

Before you begin: Have your website files ready, including a homepage named `index.html`

1. Create Your GitHub Account

1. Visit github.com and select **Sign up.**
2. Follow the prompts to choose a username and complete your account setup.
3. Verify your email address when prompted, then sign in to GitHub.

2. Create Your Website Repository

1. Select the **+** menu in GitHub, then choose **New Repository**
2. Choose your account as **Owner** and name the repository `first-website`
3. Select **Public**, turn **Add README** on, then click **Create repository**

3. Add Your Website Files

1. Open your repository's **Code** tab, then select **Add File** (or the **+** beside the green *Code* button) and choose **Upload files**
2. Upload `index.html` and any supporting CSS or image files. Keep `index.html` at the top level of the repository, not inside an extra project folder.
3. Enter a short commit message describing your upload, such as "Add website files," then click **Commit changes**

4. Publish with GitHub Pages

1. Open your repository's **Settings** tab, then select **Pages** in the sidebar.
2. Under **Build and deployment** set **Source** to **Deploy from a branch.**
3. Under **Branch**, select `main` and `/(root)`, then click **Save.**
4. Allow some time for publishing. Refresh **Settings then Pages**, then click **Visit site** to open your website.
